👋 Hello developer!

This project contains a basic HTML structure to get you started. Check our [tutorials for frontend development](#) to learn the basics of [HTML](#) and [CSS](#). ☐

☐ What's next?

Build your project however you like using HTML, CSS and JavaScript.
Use these four files as your starting point:

- **README.md:** This is the file that you are reading now. You can change the text in this file to leave information to others about your website - or delete it.
- **index.html:** This is the default page for your space, where you write HTML, the standard markup language for creating web pages.
- **styles.css:** Use the CSS file to style your content and change the look of your space with beautiful colors, fonts and much more.
- **scripts.js:** Use this file to make your website dynamic and interactive with JavaScript.

Note: The **styles.css** and **scripts.js** files link into the **index.html** file so that they are all connected.

🎨 Where to find everything

- **Fonts:** Add your favorite from **Google fonts**.
  [Go to tutorial about fonts](#)
- **Icons:** Add icons with **Fontawesome** and their free library.
  [Go to tutorial about Fontawesome](#)
- **Images:** Upload images and add their URLs to your code.
  [Go to article about how to upload files](#)

☐ **Tip:** [Set up Google Analytics](#) to get valuable insights about your space and visitors.

☐ Need support?

[Join our Discord community](#) and ask questions in the **#spaces-general** channel.

🚀 Upgrade to Pro

[Upgrade your account](#) to boost your space and take your projects to the next level; more requests, more storage and more power for up to 10 spaces.
Happy learning!
